Why does solar energy make sense now? Because there are so many different ways to participate. The state and federal governments have put laws in place to enable creative business models that put solar energy equipment where it does the most good.

Discussion By:

Andrew Wade from My Generation Energy, a solar energy installation and development company based in South Dennis. He specializes in deploying effective solar energy systems as a way to simultaneously tackle challenges which are sometimes in conflict: the economy, energy, and the environment.

What to Expect:

This discussion is meant to stimulate a conversation about photovoltaic (PV) solar in Massachusetts. Andrew's presentation will provide a brief background on how solar technology works, with a focus on keeping things simple. You will also learn about the motivations for going solar and why we need alternative sources of energy.

Once we understand these two things, we can discuss how these factors combine with several incentives to reveal your solar options.

Ask as many questions as you'd like. This is your chance to find out all you need to know about solar. Be a part of the discussion and find out what many Cape Codders have already discovered.

Cost:
